SUPPLEMENTAL RESPONSE

Sir:

In order to further establish the patentability of the presently claimed invention over the cited prior art, Applicants are enclosing herewith a Declaration Under 37 CFR 1.132 which contains further objective evidence of the unobviousness of the presently claimed invention.

In the enclosed Declaration Under 37 CFR 1.132, Applicants have synthesized pullulan-cholesterol derivatives in which the cholesteryl group introduction degree is 1.3 groups per 100 monosaccharide units, 2.1 groups per 100 monosaccharide units, 3.2 groups per 100 monosaccharide units and 3.9 groups per 100 monosaccharide units. A base beauty wash was prepared containing the above pullulan-cholesterol derivatives and comparative beauty washes containing only pullulan and without containing either pullulan or the pullulan-cholesterol derivatives were prepared. These beauty washes were assessed with respect to the elastic performance of skin treated by the beauty washes. As can be seen by the results contained in Table A in the enclosed Declaration, the

beauty wash compositions containing the pullulan-cholesterol derivatives of the present invention have superior performance with respect to elastic recovery and relative performance value. This is clearly unexpected in light of the prior art cited by the Examiner and establishes the patentability of the presently claimed invention thereover. Favorable consideration of the presently claimed invention is respectfully solicited.

Respectfully submitted,

Terryence F. Chapman
